Progress Report 1

- Project idea finalized.
- StudyForge AI structure created.
- Backend folder prepared.
- Frontend folder prepared.
- ASHIEY chatbot planned.
- Study features decided.

Progress Report 2

- The backend of StudyForge AI was developed using FastAPI to manage the main functions of the project.
- A PDF upload feature was added so students can upload their study material directly to the website.
- ASHIEY was developed to answer student questions by finding relevant information from the uploaded PDF.
- Flashcard and quiz features were added to help students revise topics in a more interactive way.
- A Concept Match game and progress-tracking features were included to make studying more engaging for students.
- The backend was tested successfully through the health check, PDF upload, and chatbot question-answering process.

Progress Report 3

- The frontend dashboard of StudyForge AI was improved to provide students with a simple and easy-to-use study interface.
- The backend and frontend were connected so that the website can use the chatbot and study tools properly.
- Features such as profile editing, theme switching, and website-import support were added to improve the student experience.
- The project files were connected to GitHub so that all code changes can be saved online safely.
- The updated backend and frontend code was checked before uploading to make sure there were no formatting or security issues.
- The latest project code was successfully committed and pushed to the GitHub repository.

Progress Report 4

- The StudyForge AI website was redesigned with a modern and student-friendly interface to make the platform more attractive and easier to use.
- The dashboard layout, study cards, navigation bar, and mobile view were improved so students can access features comfortably on different devices.
- A warm creative design theme with clear typography, soft colours, and smooth animations was added to give the website a professional look.
- The existing study features and chatbot functions were preserved during the redesign so that the improved design did not affect the working features.
- The frontend website was tested successfully, and the build process was completed without errors.
- A presentation for StudyForge AI was also prepared to explain the project idea, features, working process, and future scope.

Progress Report 5

- The main features of StudyForge AI have been completed, including the AI chatbot, PDF study support, quizzes, flashcards, games, and progress tracking.
- ASHIEY is ready to assist BTech students by answering their study-related questions in a friendly and simple way.
- Students can upload their PDF study material and receive answers based on the information available in their uploaded documents.
- The quiz and flashcard tools are available to help students revise important topics and check their understanding.
- The website design, backend functions, and frontend interface have been checked through testing to make sure the project works properly.
- The project source code is saved in the repository, while some project documents, PDFs, and generated output folders still need to be uploaded.

Progress Report 6

- The final StudyForge AI project was organized in the main project folder so that the latest version can be opened and run correctly.
- The startup process was improved to handle old or broken Python environments and allow the backend and frontend to run properly.
- The StudyForge AI website and backend were checked successfully, and both were available for use during the project demonstration.
- A complete presentation was prepared to explain the problem, solution, features, technology stack, workflow, testing, limitations, and future scope of the project.
- Speaker notes were created for the complete presentation so that the project can be explained clearly during the final presentation.
- A PDF version of the speaker notes and presentation content was generated to support project revision and final demonstration preparation.

Progress Report 7 - Final

- The final project presentation was reviewed and improved to make the explanation of StudyForge AI clear and suitable for the project demonstration.
- The presentation deck, speaker notes, and PDF materials were prepared so that the team can revise the project before presenting it.
- The technology stack and working process of StudyForge AI were explained clearly for use during the presentation and viva.
- The project demonstration flow was planned to show the dashboard, PDF upload, AI chatbot, quiz, flashcards, revision tracker, and planner features.
- The frontend build and browser testing were already completed, which confirmed that the main website interface was ready for demonstration.
- The remaining work includes replacing presentation placeholders, uploading pending documents and output files, and confirming access to the Canva presentation.
